

# KS and BEST

## Freshly ground coffee for optimal espresso

With the ECA range of semi commercial grinders we are able to provide complete solutions to the fundamental requirements of the most professional home barista needs for prestige equipment: to dispense a uniform, superior and consistent finely ground coffee for an optimum espresso outcome for taste and flavour.

The ECA BEST grinder, with its classic design, optimises the potential outcome when using fresh coffee, a better alternative to using pre-ground coffee for home use. It is equally at home in a small bar, restaurant or espresso bar environment as a second grinder for de-cafeinated coffee beans or a single origin bean.

The ECA KS Grinder offers a direct grind on demand option for the home barista enthusiast producing the freshest ground coffee on demand at the push of a button. The waste caused by over grinding coffee is greatly reduced with this KS model, limiting the unnecessary waste of your fresh coffee.

## KS and BEST information

- Quality Construction:**

Made in a solid diecast alloy housing, together with the powerful motor of these semi-commercial quality grinders ensures consistent grinding results required for high quality espresso machines and ultimate espresso cup quality.

- Tempered Steel Burr Grinding Blades:**

Made of tempered steel, these grinding blades will provide a long life with excellent performance. The consistent grind size is the key in the production of a superior espresso with rich flavour and aroma.

- Grind applications:**

French Press, Percolator, Vacuum Pot, Drip Coffee, Stovetop Mocha, Filter Coffees, Espresso Machines (for both traditional and pressurised filter handle types)
