

COFFEE QUEEN TOWER

COFFEE QUEEN TOWER is a fast, flexible bulk coffee brewer with a hot water outlet for tea. It features digital display, full and half-brewing function as well as a signal to indicate when the coffee is ready. Brewing can take place on both sides simultaneously and the digital display shows the current temperature, brewing in progress and volume on each side.

The hot water outlet for tea on the brewing unit has virtually unlimited capacity. If large quantities of hot water are used for tea during brewing, the brewing stops when the temperature gets too low, but automatically restarts as soon as the correct brewing temperature is restored.

Brewing takes place directly in 5 litre serving stations (vacuum thermoses) with unique heat retention, temperature falls only 1 °C an hour. The serving stations also have integrated handles and rotating function for simple operation. The serving stations are not connected to power and can simply be placed where you want the coffee to be served. A simple, ergonomic filter holder and 2 Serving stations in molded plastic is included with the coffee machine, as well as disposable filters. Extra serving stations and a trolley for two serving stations are available as accessories.

PERFORMANCE

- 2x5 litres on approx. 7 min
- 400 cups / hour
- Digital display
- Full- or half brew function
- Brewing complete signal
- Easy to handle
- High capacity water outlet
- Approved by European Coffee Brewing Center

TECHNICAL DATA

- 400V 3N / 9kW
- Cold water 1/2" R
- W 920 mm
- D 490 mm
- H 955 mm
